

Winter Street Bridge, Waltham

Construction Project Update

Starting Sunday, 5/23/10, the contractor will be working in conjunction with Verizon to relocate approximately 20 Verizon cables into the south side of the new bridge structure. This work is expected to take approximately 6 weeks and will be performed at overnight with I-95 detours around the work area of the bridge via the off and on ramps. After these Verizon cables are relocated, the contractor will be demolishing the remaining section of the existing bridge deck and completing the construction of the new bridge structure. The current estimated completion for this project is May/June 2011.
